

(d) third memory means capable of storing the image signal with the condition information, said third memory means being detachably attached to said apparatus;

(e) signal processing means for performing a predetermined processing on the image signal on the basis of the condition information; and

(f) control means for controlling the condition information so as to be copied from said second memory means to said first memory means when said second memory means is detached from said apparatus to continue the image pickup operation, and for controlling the condition information which is copied from said second memory means and memorized in said first memory means so as to be copied to said third memory means when said third memory means is attached to said apparatus.

38. (Amended) An image processing system, comprising:

(a) [image pickup means;

(b)] memory means for storing an image signal outputted from said image pickup means, said memory means capable of being attached to and detached from said system; [and]

[[c)] (b) reproducing means for reproducing the image signal stored by [storing] the memory means [and producing condition information representing a condition in which the image signal is picked up by said image pickup means on the basis of the image signal]; and
